# Module Objectives

The objectives of this module are to understand:

- The objectives of the Preliminary Phase
- The approach for the phase
- The steps of the phase
- The main inputs needed for it
- What the outputs are

The most important objective of the Preliminary Phase is to define how an organization develops its architecture.

# Preliminary Phase: Objectives in detail

- To review the organizational context for the architecture
- To identify the sponsor stakeholder(s) and other major stakeholders
- To ensure that everyone is committed to the success of the process
- To enable the sponsor to create requirements across the affected areas
- To identify and scope the elements that are affected and define the constraints and assumptions

Continued...

# Preliminary Phase: Objectives in detail

- To define the “architecture footprint” for the organization
- To define the framework and methods to be used
- To confirm a governance and support framework
- To select and implement supporting tools
- To define the architecture principles that may constrain the architecture work

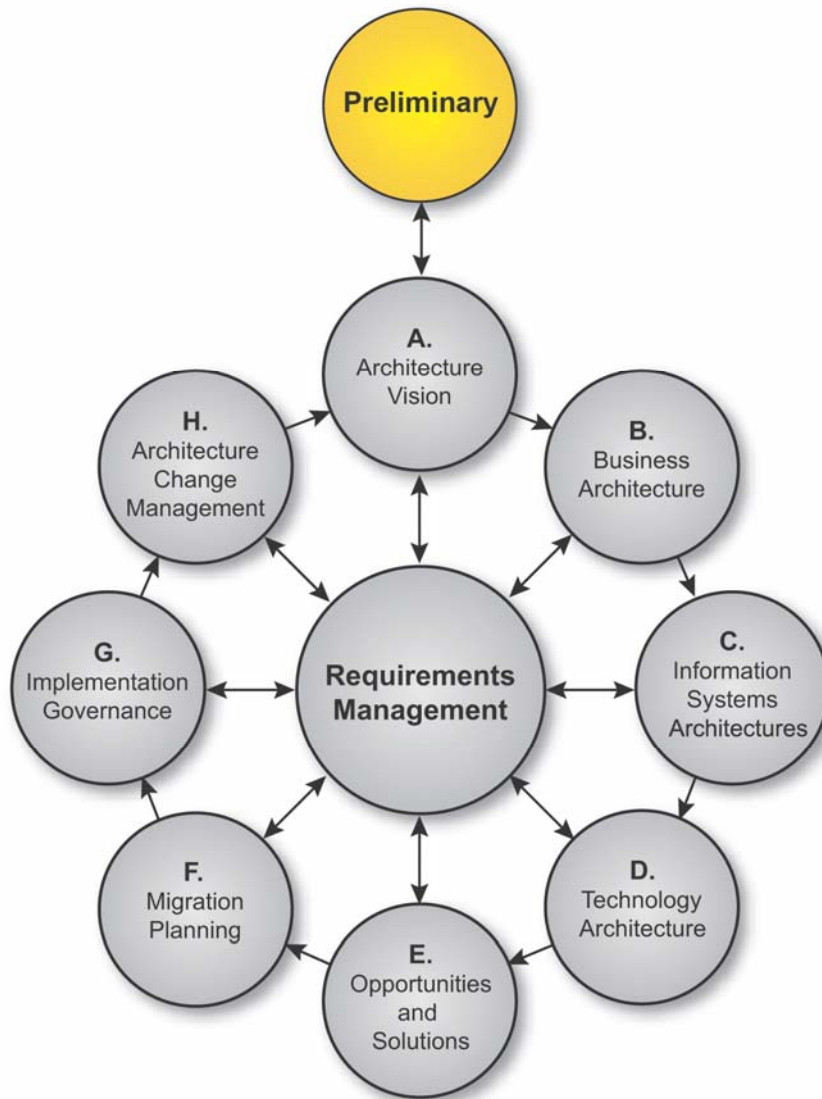

# Approach

- Define the Enterprise
- Identify key drivers and elements in the organizational context
- Define the requirements for architecture work
- Define the architecture principles that will inform any architecture work
- Define the framework to be used
- Define the relationships between management frameworks
- Evaluate the enterprise architecture maturity

# Preliminary Phase: Main inputs

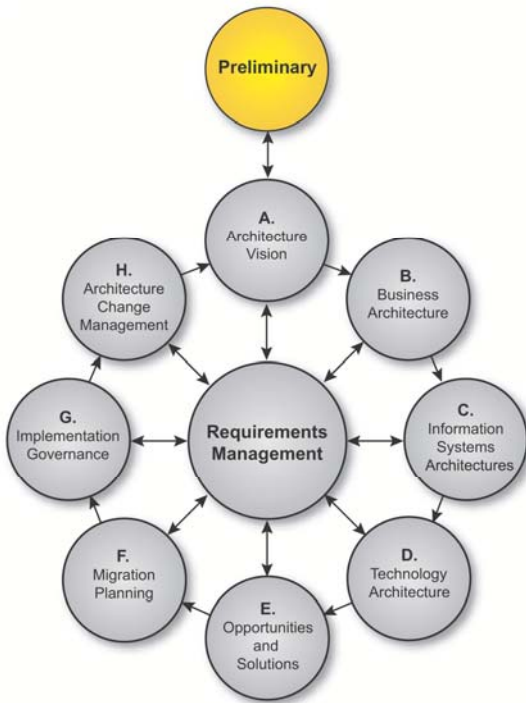

- TOGAF
- Other architecture frameworks
- Business principles, business goals, and business drivers
- Architecture governance strategy
- IT strategy

Any existing:

- organizational model
- architecture framework
- architecture principles
- architecture repository

# Steps

**6. Implement Architecture Tools**

**5. Select and Tailor Architecture Frameworks**

**4. Identify Architecture Principles**

**3. Define the Team**

**2. Confirm Governance and Support Frameworks**

**1. Scope the Enterprise Organizations Impacted**

# 1. Scope the enterprise organizations impacted

- Identify core units that will be most affected by the work
- Identify units that will see change to their work but are not directly affected
- Identify extended units that lie outside the scoped enterprise but will be affected in their own enterprise architecture
- Identify communities involved — stakeholders who will be affected and who are in a group
- Identify governance involved

## 2. Confirm governance and support frameworks

- The major output of this phase is a framework for architecture governance.
- The existing governance and support models of an organization will probably need to change
- The current governance and support models need to be assessed to understand their content.
- Sponsors and stakeholders will need to be consulted concerning the potential impact

As a result of Step 2 the architecture touch-points and likely impacts should be understood and agreed by relevant stakeholders.

# 3. Define the team and organization

- Determine existing enterprise and business capability
- Conduct an architecture/business change maturity assessment
- Identify gaps in existing work areas
- Allocate key roles and responsibilities for enterprise architecture capability management and governance
- Write requests for change for existing projects
- Scope new enterprise architecture work
- Determine constraints on enterprise architecture work
- Review and agree with sponsors and board
- Assess budget requirements

# 4. Identify and establish architecture principles

- Principles are rules and guidelines that say how an organization fulfils its mission.
- Enterprise principles enable decision-making
- IT principles guide the use and deployment of IT resources and assets
- Architecture principles are a subset of IT Principles, and include:
  - Architecture process principles
  - Architecture implementation principles

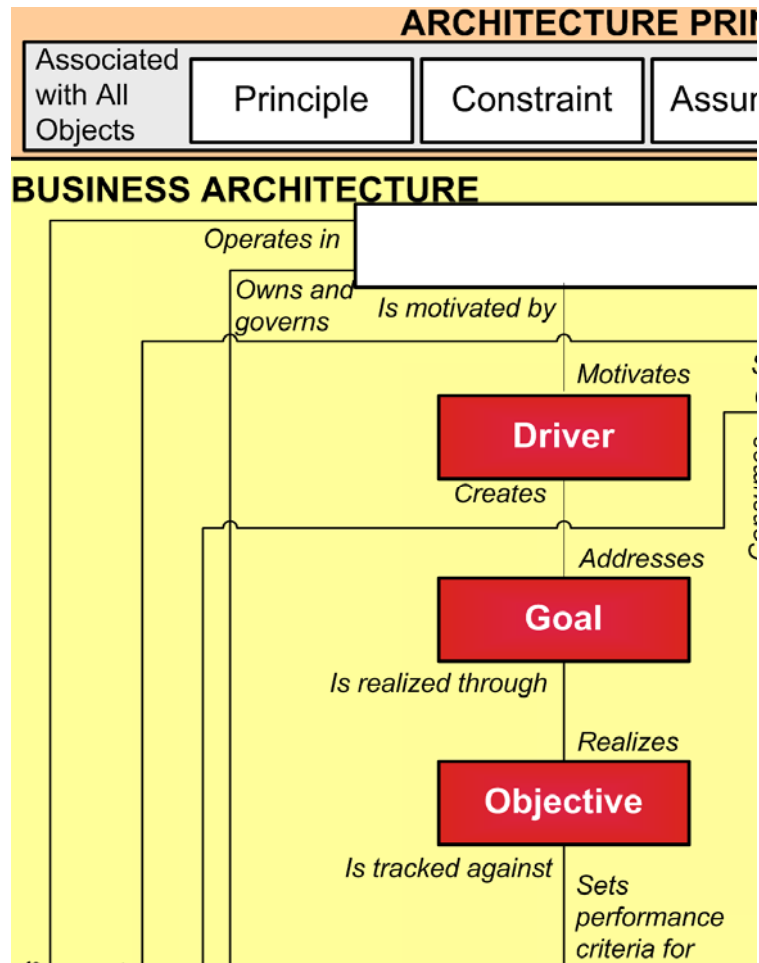

# Defining Architecture Principles

- Why
  - Architecture principles provide a framework for decision making
- Who
  - Defined by the Lead Architect
  - In conjunction with
    - The Enterprise CIO
    - Architecture Board
    - Other key business stakeholders

# Principles and the Metamodel

- Information related to Principles can be modeled, if the right information is captured
- The metamodel relates Principles back to specific drivers, goals and objectives

## 5. Select and tailor architecture frameworks

- **Terminology Tailoring:** it is best to use terminology that is understood across the enterprise.
- **Process Tailoring:** the ADM is a generic process. Process tailoring allows us to remove tasks that are done elsewhere, add organization-specific tasks and align the ADM processes with external process frameworks.
- **Content Tailoring:** using the TOGAF Architecture Content Framework, this allows adoption of third-party content frameworks and customization of the framework to support organization-specific requirements

# Terminology Tailoring

- Lack of agreement on the precise meanings of terms can cause problems of communication during the Architecture Engagement.
- Define and agree standard terminology
- Provide a Glossary, if appropriate

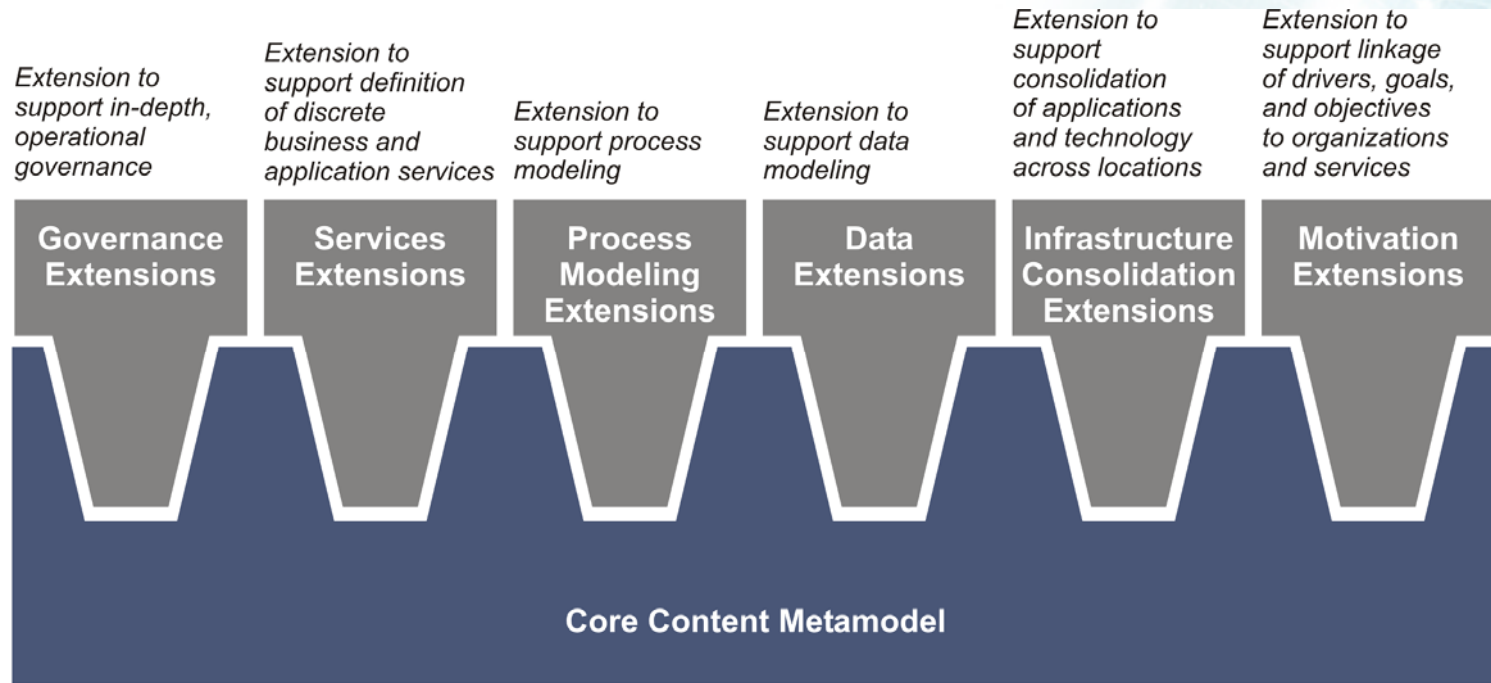

# Process Tailoring

- Re-order the phases of the ADM
- Only use a subset of the phases
- Complete the Information Systems or Technology Architecture first

# Content Tailoring

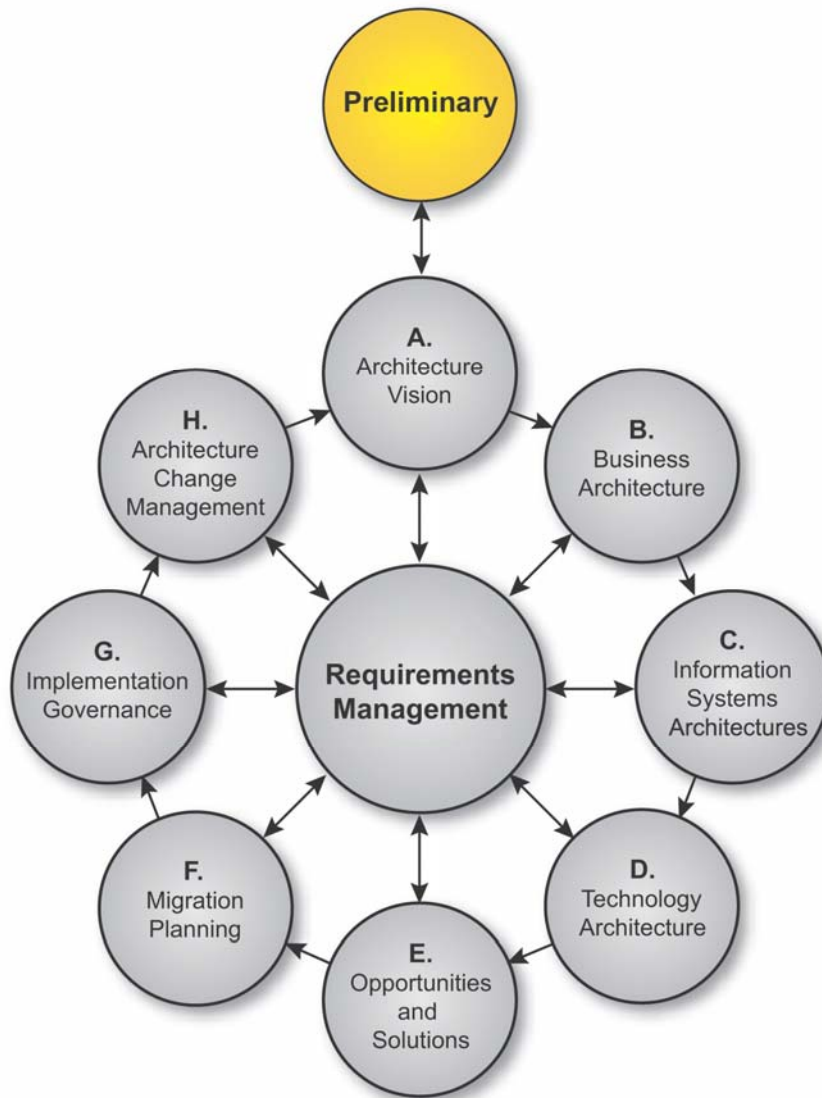

## 6. Implement architecture tools

In this step we must select appropriate architecture tools.

- The implementation of the tools may range from a trivial task to a more involved system implementation activity utilizing the TOGAF Content Metamodel

# Preliminary Phase: Outputs

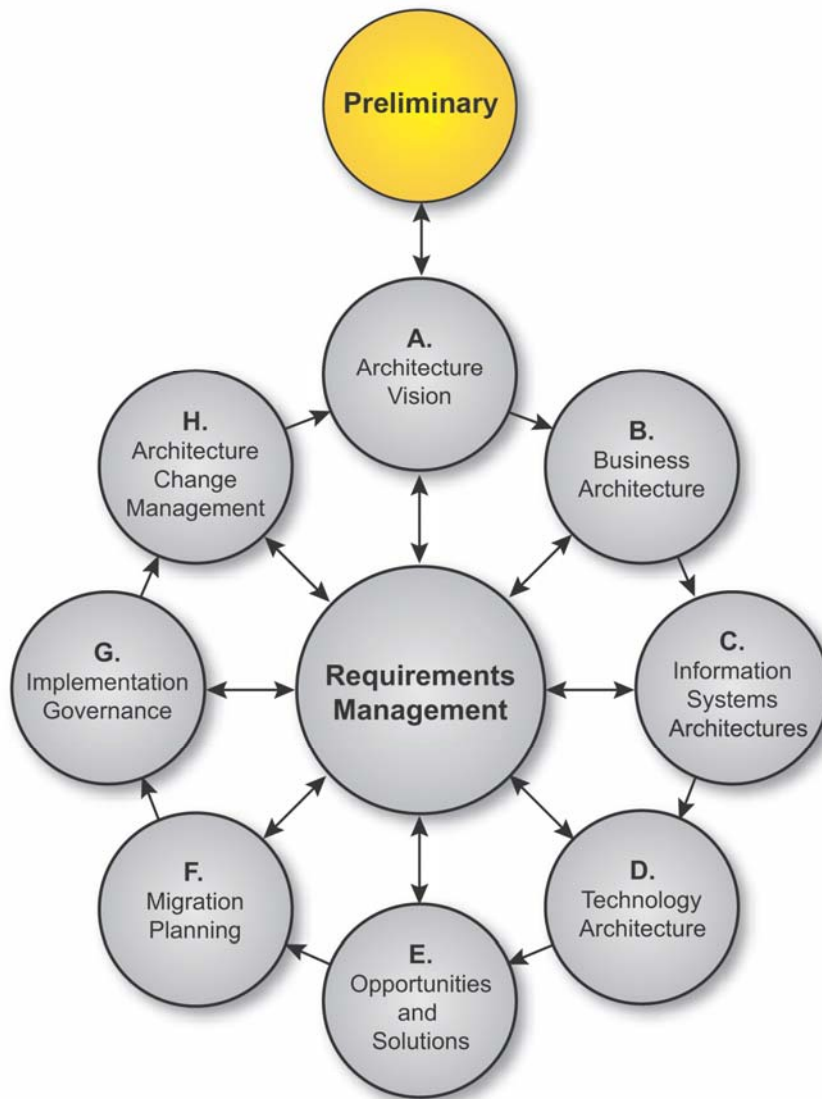

- Organizational model for enterprise architecture
- Tailored Architecture Framework, including architecture principles
- Initial Architecture Repository
- Restatement of business principles, goals and drivers
- Request for Architecture Work
- Governance Framework

# Summary

- The main objective of the preliminary phase is to prepare an organization for a successful Enterprise Architecture project by defining “how we do architecture”

Continued...

# Summary

- The steps are as follows:
  - Scope the enterprise organizations impacted
  - Confirm governance and support frameworks
  - Define the team
  - Identify architecture principles
  - Select and tailor architecture frameworks
  - Implement architecture tools
